

University Admit Eligibility Predictor

Team ID : PNT2022TMID35033

OBJECTIVE:

The main objective of this project is to predict the admission process of university based on numerous factors. The admission process depends on criteria within the particular college or degree program. The proposed System helps a person to decide what colleges they can apply to with their scores. The primary purpose is to discuss the prediction of student admission to university based on numerous factors and using logistic regression. Many prospective students apply for Master's programs. The admission decision depends on criteria within the particular college or degree program. The independent variables in this study will be measured statistically to predict graduate school admission. Exploration and data analysis, if successful, would allow predictive models to allow better prioritization of the applicants screening process to Master's degree programme which in turn provides the admission to the right candidates.
